

## Put the method in order

| Name | Group | Date |
|------|-------|------|
|------|-------|------|

Cut out the steps. Put them in the right order. WARNING: two of them do not belong at all — find them and leave them out.

|                                                                                 |
|---------------------------------------------------------------------------------|
| Pour the filtered liquid into the weighed basin.                                |
| Let the basin cool for five minutes.                                            |
| Fold the filter paper into a cone and sit it in the funnel. (filtering)         |
| Stir the sand until it dissolves.                                               |
| Subtract the empty basin mass to find the salt recovered.                       |
| Hand the basin to the teacher to go on the frypan.                              |
| Weigh the empty basin and write the number down.                                |
| Weigh the basin with the salt in it.                                            |
| Pour the salt down the sink and start again.                                    |
| Pour the mixture slowly through the filter, into the second beaker. (filtering) |
| Wait for the water to evaporate away.                                           |
| Let the sand settle, then pour the liquid off it carefully. (decanting)         |

## My results

| Name                  | Group | Date |
|-----------------------|-------|------|
| Empty basin           |       |      |
| Basin with salt in it |       |      |
| Salt I got back       |       |      |
| Salt I started with   | 8 g   |      |
| How much is missing   |       |      |

### Finish these sentences

My method was **FILTERING** / **DECANTING** (circle one)

The sand was separated out because \_\_\_\_\_  
\_\_\_\_\_.

The salt went straight through because \_\_\_\_\_  
\_\_\_\_\_.

The white solid in my dish is \_\_\_\_\_.

I did not get all 8 grams back because \_\_\_\_\_  
\_\_\_\_\_.

The missing salt was NOT destroyed. It is \_\_\_\_\_  
\_\_\_\_\_.

**Word bank** dissolved • too small • filter paper • left in the beaker • evaporated • salt • still damp • source of error
